Lakelse Air

Helicopter Service

Lakelse Air Ltd. has been providing charter services in northern B.C. since 1994 and has an excellent safety record. Our fleet consists of Bell 204C, Bell 206B, MD 500D, AStar 350 B2, Kaman K-MAX K1200 and Robinson R44 helicopter.

During 2004 *Lakelse Air* expanded operations in north western B.C. with the opening of remote airbases in Stewart and Bob Quinn. In 2005 *Lakelse Air* received it's certificate of recognition for safety and quality control.

The 500D, 206B and R44 are equipped to perform a variety of tasks including grass seeding, creek cleaning, fire fighting, drip torching and the movement of passengers and freight. The 500D and the 206B are each capable of carrying four passengers while the As350 can carry five passengers, the 204C can carry 10 passengers. The R44 has room for three passengers and are an excellent cost effective method of moving small crews. The R44 is also effective for carrying out aerial reconnaissance with one or two observers plus a pilot.

For heavy-lift loads we operate the Kaman K-MAX helicopter which can sling loads weighing up to 6,000 pounds.

Also available for working in remote locations is a fuel truck capable of carrying 17,000 litres of aviation fuel.

Our machines have primarily been used for flying support in mining exploration, coastal logging/road building operations, forestry operations such as Mountain Pine Beetle control, timber cruising, heli-logging, fire fighting, oil & gas exploration and flying guests at local fishing lodges. With the recent addition of pilots experienced in all seismic operations (front end work, drill & bag moves) and mining exploration, we look forward to future growth providing a high level of service to both the oil & gas and mining industries.
